WHAT IS THE GRAVITAS?

Gravitas is a sophisticated dynamics processor for all purposes ranging from single tracks, groups, buses to entire mixes. The extensive parameter set makes it capable of properly tackling the dynamics of any material.

You can compress and expand your sound above and below the threshold in one single processing circuit instead of having several processors serially treating your signal. That gives you outstanding clarity on the one hand and any amount of punch on the other while shaping the dynamic range exactly the way you want.

Gravitas not only comes as a plugin but is also integrated into the Dolby Atmos Composer for processing your Dolby Atmos mix or imported Dolby Atmos ADM/BWF files.

For more information please check out the tutorials mentioned on page 3 of this manual.

TRIAL AND ACTIVATION

After successful installation, open gravitas in your host and a window will open automatically, showing you the about screen and the possibility to start your 14 day trial period or activate the plugin.

To start your trial period just click the "Try" button. The trial period starts with the first click on this button.

After purchasing gravitas you will receive a serial number via email. To activate the plugin just copy the serial number, paste it into the grey field and hit "Activate". The window will close automatically and the plugin is activated. A purchased serial number allows activation on two computers.

If for some reason starting your trial or activation does not work please check out the Spacelab tutorial about activation for trouble shooting. The activation processes of Spacelab and gravitas are identical. If the solutions provided there don't work please contact our customer support.

TUTORIALS

Instead of writing a manual which is miles long we decided to explain everything about gravitas in video tutorials. There is a total of 4 tutorials.

All tutorials can be found on our youtube channel at:

<https://www.youtube.com/channel/UC7ZgC1zLrJ5hRnsJCgpCquA>

The topics of the tutorials are:

1. Gravitas - main tutorial
2. Gravitas - Input Configuration Dialog
3. Gravitas - Parameter Linking Editor
4. Dolby Atmos Composer v1.5 - new features

SYSTEM REQUIREMENTS

Plugin Formats:	VST3, AU, AAX, Dolby Atmos Composer module (requires Dolby Atmos Composer)
Supported Operating Systems:	macOS 10.14 through 14 Windows 10, 11
CPU:	Intel min. 2 GHz, x64 with at least SSE3 support, or Apple Silicon M1 or higher
Display/Graphics:	min. 1440 x 900 px, OpenGL 3.3 or newer
